Pipeline Metal Detector

Pipeline Systems are custom manufactured for the inline inspection of pumped liquids and pastes that are transported through a pipe. Stealth Metal Detectors use powerful Digital Signal Processing technology and have high sensitivity levels to ensure the detection of the smallest ferrous, non-ferrous, and stainless steel contaminants

Custom manufactured to suit any application, Stealth pipeline detectors are available in stainless steel construction

Superior speed, accurate
Easy To Use

What is a Metal Detector... and how Digital Signal Processing (DSP) work

Three coils are wound exactly parallel on a non-metallic frame. The center coil is connected to a high-frequency radio transmitter. Two transmission-receiving coils sit on either side of the center coil. Two transmission-receiving coils sit on either side of the center coil

Ideal For These Applications

contaminated product from the flow. Additionally, a test ball retrieval drawer is offered, allowing for ease of manual testing

Key Benefits

- ✓ Automatic Calibration at the touch of a button
- ✓ UltraSense Detection
