

TTO-Thermal Transfer Overprinting

The Linx TT 500 have been developed To provide a market leading range of thermal transfer overprinters to help reduce total cost of ownership & increase production line output via increased uptime, speeds and further improved ease of use. The Linx TT 500 thermal printer will grow your business by performing up to expectation

The printhead is made up of a series of miniature print elements under a ceramic coating, while the ribbon is covered with a specially-formulated coloured wax and resin mixture. As the elements heat small areas of the ribbon, the mixture melts and is transferred to the substrate surface, where it adheres as the surface moves under the printer
